Iteration Plan Sprint 1 Feedback

by Vladimir

Firstly, the iteration plan looks good for Sprint 2 and its backlog.

I want to emphasize some aspects:

1. Added US #40 'As a reader, I want my place in a book to be saved, so that I can return to that place at a later time'. From stakeholder Lisa about bookmarks.
2. Tasks for the user stories have been written right.
3. In US # 8 added task Design search feature. As it was discussed during the meeting.
4. The team is not cross-functional, so it will increase the risks during the Sprint 2. One developer works inside every user story and only execution of the acceptance tests is not assigned for the developer. It's better to assign all developers in our small team to each user story.
5. For Sprint 2 we need to use Kanban board to assign tasks and follow the progress of the tasks.
6. Total assigned hours in the Iteration plan is 124 hours, but total assigned hours for developers is 61 hours. It should be corrected. During correction you should notice that the total available hours for developers is 105 hours.
7. Nobody assigned for the tasks in US #6,7,8,40. In others US # 2,3,4,5 not all tasks assigned. Needs correction.
